

RESIDENT COIN INSTALLATION PROCEDURE

Caution !!

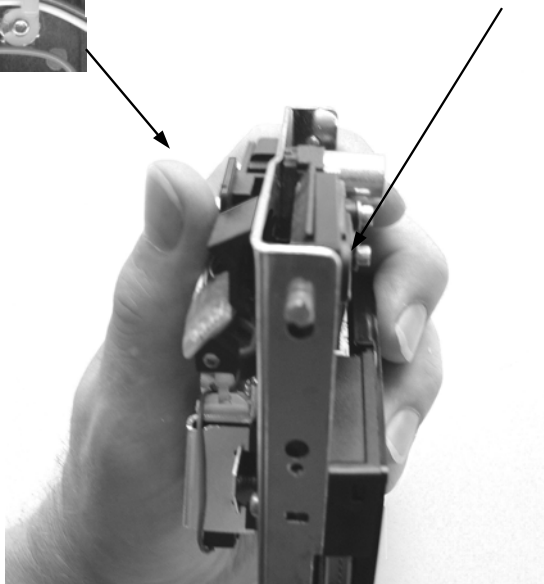

Coin Mechanism's and most game manufacturers recommend that the Game be powered down before changing any parts including the coin acceptor.

You must unplug the power connector from the Intelligent Comparitor before removing the token holder or Intelligent Comparitor from the channel, otherwise there is a risk of electrical damage to the mechanism or the machine.

Clip and screws on back

Do not push on the damper lever to slide open the coil assembly as lever will break.

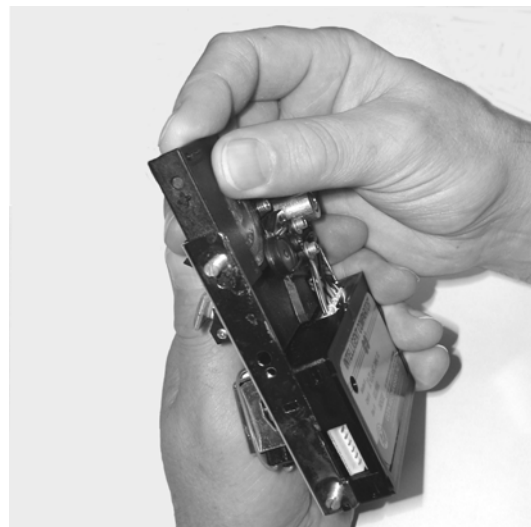

We recommend using the clip and screws on back for leverage to slide the sensor coil assembly back to loosen token holder.

Pull token holder up and free of assembly.

Turn token holder over and insert token as shown.

Slide sensor coil stack back and replace token holder.
